

"I've always done [music] seriously, but actually just recently is when I started going, 'Okay, this is going to be a career for me.' Like, I've always done music. And then I started gigging about when I was like 12 or 13. I was doing a show as much as I could, which wasn't very often because I didn't have very many songs at 12 and 13. And then, I got to about 14 or 15 and started doing more shows, and then about 16 I did about a show almost every week! And now I try to do them, more. Like, two or three times a week and I'm 17 now. But, just recently I actually just stopped doing regular school. I'm doing online school now so that I can do music full time. So I'd say recently is when I was like, 'Okay this is gonna be a career.' I always wanted it to be a career, but, it wasn't 'til recently that I was for sure."

Through his YouTube channel, Trevor has had many amazing opportunities. *"I was recently invited to YouTube for my music. And I got to go to the YouTube space in LA, it was awesome!"* Not only has his channel inspired many others, he is constantly getting inspiration through others' channels, one of his biggest inspirations being the science and engineering-based channel, Vertassium. *"I met him! And it was insane! 'Cause he was one of the guys that inspired me to make that science channel!"* The channel he's talking about, stopdropandscience, is one of Trevor's newest projects. His goal is to raise awareness of scientific ideals and concepts.

***"I LIKE SCIENCE A LOT.
SCIENCE IS COOL."***
